PROFESSIONAL SUMMARY

Driven developer with experience in building mobile and web applications using modern frameworks and cloud technologies. Skilled in frontend development, and backend integration, with a focus on clean UI, scalable systems, and real-world problem solving through rapid prototyping.

ACADEMIC PROJECTS

Tarang – Crowdsourced Disaster Management App [Github](#) *Aug 2025 – Present*

- Engineered a **cross-platform Flutter application** with Firebase backend for real-time coastal hazard reporting, enabling citizens to submit **geotagged** incident reports with multimedia evidence using Geolocator.
- Developed a **role-based interface** for citizens and officials using Firestore real-time listeners, featuring a live interactive **OpenStreetMap** view (flutter map) with severity-coded markers and official-side review workflows.
- Designed data models and **prototype** analytics layer (incident statistics, social-sentiment trends, trending keywords), laying the groundwork for NLP-based hazard detection pipeline.
- Integrated **Supabase Authentication, Cloud Firestore and Firebase Storage**, for real-time data sync between citizen and official clients; began integrating the Google Gemini API for AI-assisted disaster-specific mitigation recommendations.

Contract Guard – AI-Powered Contract Analysis [Github](#) *Apr 2026 – Present*

- Developed an AI-powered contract analysis platform using **Gemini LLM** and deterministic keyword scanning to identify risky clauses and generate automated risk assessments.
- Applied computationally efficient ML/DL techniques using NumPy and Pandas to optimize model runtime, feature extraction, and memory usage.
- Implemented a **Retrieval-Augmented Generation (RAG)** pipeline enabling natural language querying of contracts and automated extraction of key metadata (parties, dates, payment terms, governing law).
- Built AI-based vendor verification, contract comparison, and digital signature verification using **Zoho Sign OAuth 2.0** integration.

EDUCATION

Meerut Institute of Engineering & Technology (MIET) *Sep 2023 – expected Jun 2027*

B.Tech in Computer Science Engineering (AI/ML)

Cumulative GPA: 7.0 / 10.0

TECHNICAL SKILLS

Programming Languages: C++, Python, Dart

Frameworks & Libraries: Flutter, Firebase, Supabase, NumPy, Pandas, PyTorch, TensorFlow, RAG, NLP, OAuth 2.0

Tools & Platforms: Linux, Debian CLI, Android Studio, Git, GitHub, Figma, Canva

Concepts: Data Structures and Algorithms, Object-oriented Programming, DBMS

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

Microsoft Learn Student Ambassador (MLSA) Club, MIET

- Graphics Volunteer** (Nov 2024 – May 2025): Coordinated with a team of 4 designers to design visual assets for club events; increased reach by 60%. Organized 3 hackathons and conducted 10+ technical sessions for 500+ students.

Google Developer Groups (GDG) Club, MIET

- Graphics Volunteer** (Jan 2025 – Sep 2025): Coordinated with a team of 4 to develop visual assets and implement UI for event websites, improving overall user engagement.
- Graphics Head** (Sep 2025 – May 2026): Led a team of 3 designers; oversaw UI design for event websites. Organized 4+ events and 2 national-level hackathons for 800+ participants.
